

## DIRECTOR'S CUT

Like it or not the last 3 months have been some of the most challenging in recent years, with record numbers of people applying for the few jobs available and a real shortage of work, especially in the building sector.

This morning's Daily was the first piece of encouraging news with one of the coasts leading building companies looking to employ 250 tradies in the coming 12 months.

Bring on more good news!!! The coast can surely do with it.

Remember those of you in business here: Endeavour to spend locally so the money stays here!!

Best wishes and stay positive.

Dave Bissett  
Director

## NEW PRODUCT SQUAT TANK

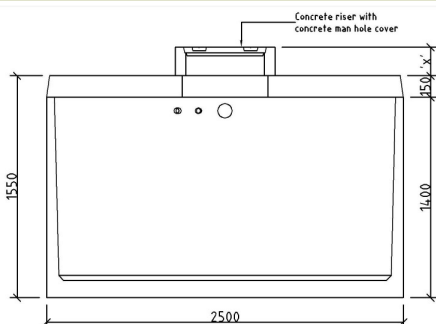

Introducing the 5,200Lt heavy duty concrete rainwater **squat** tank.

The height of this tank is 1.55mt including trafficable lid with a diameter of 2.5mt. The tank also includes a concrete riser for the man hole with options of covers to suit.

This tank is manufactured and designed for under ground positioning in residential developments with small housing blocks.

We are offering tank / pump packages which include Onga WaterSwitch with either an external or a submersible pump.

For more information visit [www.allcastprecast.com.au](http://www.allcastprecast.com.au) or phone one of our staff members on 5442 2522.

## NEED MORE SPACE?

Why not use an Allcast Precast squat 5,200Lt or 10,200Lt concrete underground tank for your residential water storage requirements.

As housing blocks are becoming smaller and smaller and the Australian population entertains more in the privacy of their own backyards, space becomes a precious item. Placing concrete underground rainwater tanks below the garage slab or garden areas is the most effective way of water harvesting while eliminating the visual component.

Our concrete underground rainwater tanks can be positioned the same time excavation of house footings is taking place or once the build is completed and landscaping is under way. All sockets and threaded fittings are cast into the tank allowing easy installation for plumbers.

### SHOWCASING:

Next month we will be back at the Farm Fantastic in Caboolture from the Friday 15<sup>th</sup> – Sunday 17<sup>th</sup> July where we will showcase our new 5,200Lt concrete squat tank. Come along and we'll see you there.

## SET IN CONCRETE

Moving forward has been the focus of Allcast Precast for the last few months. We have just released our new product, the 5200Lt concrete rainwater squat tank, where we also offer pump package options. Our brand new product brochure can be viewed and downloaded on our website containing information regarding the pumps available and specifications of our squat concrete water tank.

Our first small diameter squat tank has already been buried in the ground at Pelican Waters to another satisfied customer!

In May we were present at the Gympie and District Show where we received some great feedback and support from the locals. We showed off our heavy duty 23,000Lt concrete tank which was the main attraction. The show itself was great and really catered for the families and we enjoyed the few days we had there.

Allcast Precast has also been nominated for the Sunshine Coast Excellence in Business Awards and is hoping to capitalize on the quality and service we have been providing over the years.

We have also manufactured and delivered a number of concrete water tanks out to the Lockyer Valley which is great to see that the area is gradually recovering from the recent disasters (see photos below).

6 x 23,000Lt Heavy duty tanks

82,000Lt Rainwater harvesting tanks

## ROCK SOLID NEWS:

It would take 13,866 cans of XXXX beer to fill the 5200Lt concrete squat rainwater tank which works out to be approximately 578 cartons.

We do advise to drink responsibly.
